

- **Transfer learning and fine-tuning**
- **Configure the dataset for performance**
- **Use data augmentation**
- **Rescale pixel values**
- **Create the base model from the pre-trained convnets**
- **Feature extraction**
- **Freeze the convolutional base**
- **Important note about BatchNormalization layers**
- **Learning curves • Fine tuning**
- **Un-freeze the top layers of the model**
- **Compile the model**
- **Continue training the model**
- **Evaluation and prediction**
- **Summary**
- **Transfer learning with TensorFlow Hub**
- **An ImageNet classifier**
- **Download the classifier**
- **Run it on a single image**
- **Decode the predictions**
- **Simple transfer learning**
- **Dataset**
- **Run the classifier on a batch of images**
- **Download the headless model**
- **Attach a classification head**
- **Train the model**
- **Check the predictions**
- **Plot the result**
- **Export your model**
