

TEKLRN

TENSORFLOW LEVEL 18

1. Word embeddings
2. Representing text as numbers
3. One-hot encodings
4. Encode each word with a unique number
5. Word embeddings
 - Setup
6. Using the Embedding layer
7. Learning embeddings from scratch
8. Create a simple model
9. Compile and train the model
10. Retrieve the learned embeddings
11. Visualize the embeddings
12. Text classification with an RNN
 - Setup
 - Setup input pipeline
13. Prepare the data for training
 - Create the model
14. Train the model
15. Stack two or more LSTM layers
