

TEKLRN

KERAS LEVEL 22

1. Serialization and Saving
 - Introduction
 - Saving a Keras Model
 - Loading the Model Back
 - Setup
2. Whole-model saving & loading
3. Saving and Loading APIs
4. SavedModel format Code Example
 - What the SavedModel contains
 - How SavedModel handles custom objects
5. Keras H5 format
6. Saving the architecture
7. Configuration of a Sequential model or Functional API model
 - APIs
 - `get_config()` and `from_config()`
 - Layer Example
 - Sequential Model Example
 - Functional Model Example
8. Custom Objects
 - Models and Layers
 - Custom Functions
 - Loading the Tensorflow graph only
 - Defining the Config Methods
 - Registering the Custom Objects
9. Saving & loading only the model's weights values
 - APIs for in-memory weight transfer
 - Transferring weights from one layer to another, in memory
 - Transferring weights from one model to another model with a compatible architecture, in memory
 - The case of stateless layers
10. APIs for saving weights to disk & loading them back
11. TF Checkpoint format
12. HDF5 format
