

TEKLRN

DOCKER LEVEL 23

1. Antivirus software and Docker
2. AppArmor security profiles for Docker
 - Understand the policies
 - Load and unload profiles
 - Nginx example profile
 - Debug AppArmor
 - Use dmesg
 - Use aa-status
3. Contribute Docker's AppArmor code
4. Seccomp security profiles for Docker
5. Pass a profile for a container
6. Significant syscalls blocked by the default profile
7. Run without the default seccomp profile
8. Isolate containers with a user namespace
9. About remapping and subordinate user and group IDs
 - Prerequisites
10. Enable userns-remap on the daemon
11. Disable namespace remapping for a container
12. User namespace known limitations
