

1. **Gradient Boosted Trees: Model understanding**
2. **How to interpret Boosted Trees models both locally and globally**
3. **Load the titanic dataset**
4. **Create feature columns, input_fn, and the train the estimator**
5. **Preprocess the data**
6. **Build the input pipeline**
7. **Train the model**
9. **Model interpretation and plotting**
10. **Local interpretability**
11. **Global feature importances**
12. **Gain-based feature importances**
13. **Average absolute DFCs**
14. **Permutation feature importance**
15. **Visualizing model fitting**
16. **Create an Estimator from a Keras model**
 - **Overview**
 - **Setup**
17. **Create a simple Keras model.**
18. **Create an input function**
