

TEKLRN

SPRING LEVEL 7

1. Using JSR 330 Standard Annotations
2. Dependency Injection with @Inject and @Named
3. @Named and @ManagedBean: Standard Equivalents to the @Component Annotation
4. Limitations of JSR-330 Standard Annotations
5. Java-based Container Configuration
6. Java-based Container Configuration
7. Instantiating the Spring Container by Using AnnotationConfigApplicationContext
8. Simple Construction
9. Building the Container Programmatically by Using register(Class<?>...)
10. Enabling Component Scanning with scan(String...)
11. Support for Web Applications with AnnotationConfigWebApplicationContext
12. Using the @Bean Annotation
13. Bean Dependencies
14. Receiving Lifecycle Callbacks
15. Specifying Bean Scope
16. Customizing Bean Naming
17. Bean Aliasing
18. Bean Description
19. Using the @Configuration annotation
20. Lookup Method Injection
21. Further Information About How Java-based Configuration Works Internally
22. Composing Java-based Configurations
23. Conditionally Include @Configuration Classes or @Bean Methods
24. Combining Java and XML Configuration
