

## TEKLRN

### DOCKER LEVEL 39

1. Enable IPv6 support
2. Docker and iptables
  - Add iptables policies before Docker's rules
  - Restrict connections to the Docker host
  - Docker on a router
  - Prevent Docker from manipulating iptables
3. Setting the default bind address for containers
4. Container networking
  - Published ports
  - IP address and hostname
  - DNS services
  - Proxy server
5. Configure Docker to use a proxy server
  - Configure the Docker client
  - Use environment variables
  - Set the environment variables manually
