TEKLRN

C# LEVEL 38

- 1. Methods
 - Method signatures
 - Method access
- 2. Method parameters vs. arguments
- 3. Passing by reference vs. passing by value
- 4. Return values
- 5. Async methods
- 6. Expression body definitions
- 7. Iterators
- 8. Local functions
 - Local function syntax
 - Local functions and exceptions
 - Local functions vs. lambda expressions
- 9. Ref returns and ref locals
- 10. What is a reference return value?
- 11. Defining a ref return value
- 12. Consuming a ref return value
- 13. Ref locals
- 14. Ref returns and ref locals: an example
- 15. Passing Parameters
 - Passing Value-Type Parameters
 - Passing Value Types by Value
 - Passing Value Types by Reference
- 16. Swapping Value Types
- 17. Passing Reference-Type Parameters

- 18. Passing Reference Types by Value
- 19. Passing Reference Types by Reference
- 20. Swapping Two Strings
- 21. How to know the difference between passing a struct and passing a class reference to a method
