TEKLRN

C# LEVEL 39

1. Implicitly typed local variables
   - var and anonymous types

2. How to use implicitly typed local variables and arrays in a query expression
   - Example

3. Extension Methods
   - OrderBy Example

4. Binding Extension Methods at Compile Time
   - Example

5. Common Usage Patterns

6. Collection Functionality

7. Layer-Specific Functionality

8. Extending Predefined Types
   - General Guidelines

9. How to implement and call a custom extension method
   - To define and call the extension method
   - Example

10. .NET Security

11. How to create a new method for an enumeration
    - Example

12.

13. Named and Optional Arguments

14. Named Arguments
    - Example

15. Optional Arguments
    - Example

16. COM Interfaces

17. Overload Resolution

18. How to use named and optional arguments in Office programming

19. To create a new console application

20. To add a reference

21. To add necessary using directives

22. To display text in a Word document

23. To run the application

24. To change the text to a table

25. To experiment with other parameters
    - Example
