- Types (C#)
- How to convert a byte array to an int
- Example
- How to convert a string to a number
- Calling the Parse and TryParse methods
- Calling the Convert methods
- Using type dynamic
- Conversions
- Overload resolution with arguments of type dynamic
- Dynamic language runtime
- COM interop
- Walkthrough: Creating and Using Dynamic Objects (C# and Visual Basic)
- Creating a Custom Dynamic Object
- To create a custom dynamic class
- To create a sample text file
- To create a sample application that uses the custom dynamic object
- Calling a Dynamic Language Library
- Calling a Dynamic Language Library
