TEKLRN

DOCKER LEVEL 15

1. Collect Docker metrics with Prometheus
   - Introduction
   - Why use Prometheus

2. Configure Docker
   - Configure daemon as a Prometheus Target

3. Configure and run Prometheus
   - Prerequisites
   - Configuration on Linux, Mac or Windows
   - Start a single-replica Prometheus service using this configuration.
   - Verify the docker Target is Listed

4. Use Prometheus
   - Create a graph.
   - Click the **Graphs** link in the Prometheus UI.
   - To make the graph more interesting, create some network actions by starting a service with 10 tasks that just ping Docker non-stop.
