TEKLRN

KERAS LEVEL 29

1. Training Keras models with TensorFlow Cloud
   - Introduction
   - Setup

2. API overview: a first end-to-end example

3. Google Cloud configuration
   - Create a GCP Project;
   - Enable AI Platform Services;
   - Create a Service Account;
   - Download an authorization key;
   - Create a Cloud Storage bucket.

4. Common workflows and Cloud storage

5. Large-scale projects

6. Entry points: support for Python scripts and Jupyter notebooks
   - pip dependencies
   - Python notebooks
   - Multi-file projects

7. Machine configuration and distributed training
   - Multi-worker distribution
   - TPU distribution
   - Custom distribution strategy

8. Custom Docker images

9. Additional metrics
